

Sumit Nayyar

UX DESIGNER / FRONTEND ENGINEER

PROFILE

UX Designer and Frontend Engineer with 4+ years building user-centric SaaS products. I design in Figma and ship in React and TypeScript, closing handoff gaps and turning data-dense workflows into well-crafted, accessible interfaces. Backed by an HCI Master's from Aalto University. Based in the Helsinki metropolitan area and committed to building my long-term career and home in Finland.

PROFESSIONAL EXPERIENCE

Deda Next (Dedagroup) | UX Designer & Researcher

Trento, Italy · Mar 2026 to May 2026

- Worked on EDIAQI, an EU Horizon Europe project, designing how indoor air quality data helps schools and public buildings make better facility decisions.
- Researched user needs, mapped messy multi-stakeholder workflows, and delivered the first version of a decision-support and reporting experience.
- Translated high-volume sensor data into clear, interactive visualizations built to reduce cognitive load for non-technical users.

Optmyzr | Frontend Engineer (SDE-II)

Remote / Hyderabad · May 2020 to Jul 2024

- Progressed from intern to SDE-II on the Core team, owning the frontend migration of the platform's two highest-traffic, data-dense analytics applications (Account Dashboard and PPC Comparison Tool).
- Designed a runtime, metadata-driven configuration engine that parses JSON definitions to instantiate multi-platform UI components dynamically, cutting new ad-network integration from a multi-day core rewrite to a configuration checklist.
- Eliminated global cascade re-rendering loops across dense dashboard grids by isolating data domains into localized Redux slices with memoized selector filters.
- Built a progressive, viewport-driven lazy-hydration pipeline that loads heavy plots and metric lists asynchronously as their containers enter the viewport.
- **Impact:** Reduced core dashboard load and time-to-interactive from 8 to 10 seconds down to under 1 second under enterprise production loads.

EDUCATION

Aalto University | M.Sc. Human-Computer Interaction & Design

Espoo, Finland · Expected Aug 2026

- **Focus:** Usability engineering, information architecture, interactive systems.
- **Thesis:** Translating complex indoor air quality sensor data into actionable insights for non-technical users.

Universita di Trento | M.Sc. Cognitive Science (dual degree)

Trento, Italy · Expected 2026

CORE STACK

Frontend & Architecture

React TypeScript
JavaScript ES6+
Redux Toolkit
HTML5 / CSS3 / Sass
REST APIs

Design & Strategy

Information Architecture
User Workflows
Design Systems Figma
Rapid Prototyping
Usability Testing
Accessibility

Systems & Operations

Git / GitHub Firebase
Webpack
DevTools Profiling

TARGETED EXPERTISE

- › Legacy stack migrations
- › UI/UX performance triage
- › Config-driven dashboards
- › Cognitive load optimization
- › Zero-handoff system specs
